

Presentation Deck

Objective

- Predict if an applicant will default on their loan at the point of loan application (Month On Book = 0), whether prediction is correct will be observed at MOB = 6
- We have the following 4 files about the customers

1st

lms_loan_daily.csv :
What loans do
customers have

2nd

features_financials.csv :
All about customers'
financial situation

3rd

features_attributes.csv :
All about customers'
personal attributes

4th

features_attributes.csv :
20 features about
customers

Bronze Table

03/06

lms_loan_daily.csv

features_financials.csv

features_attributes.csv

features_clickstream.csv

Combined based on
Snapshot date and
Customer ID

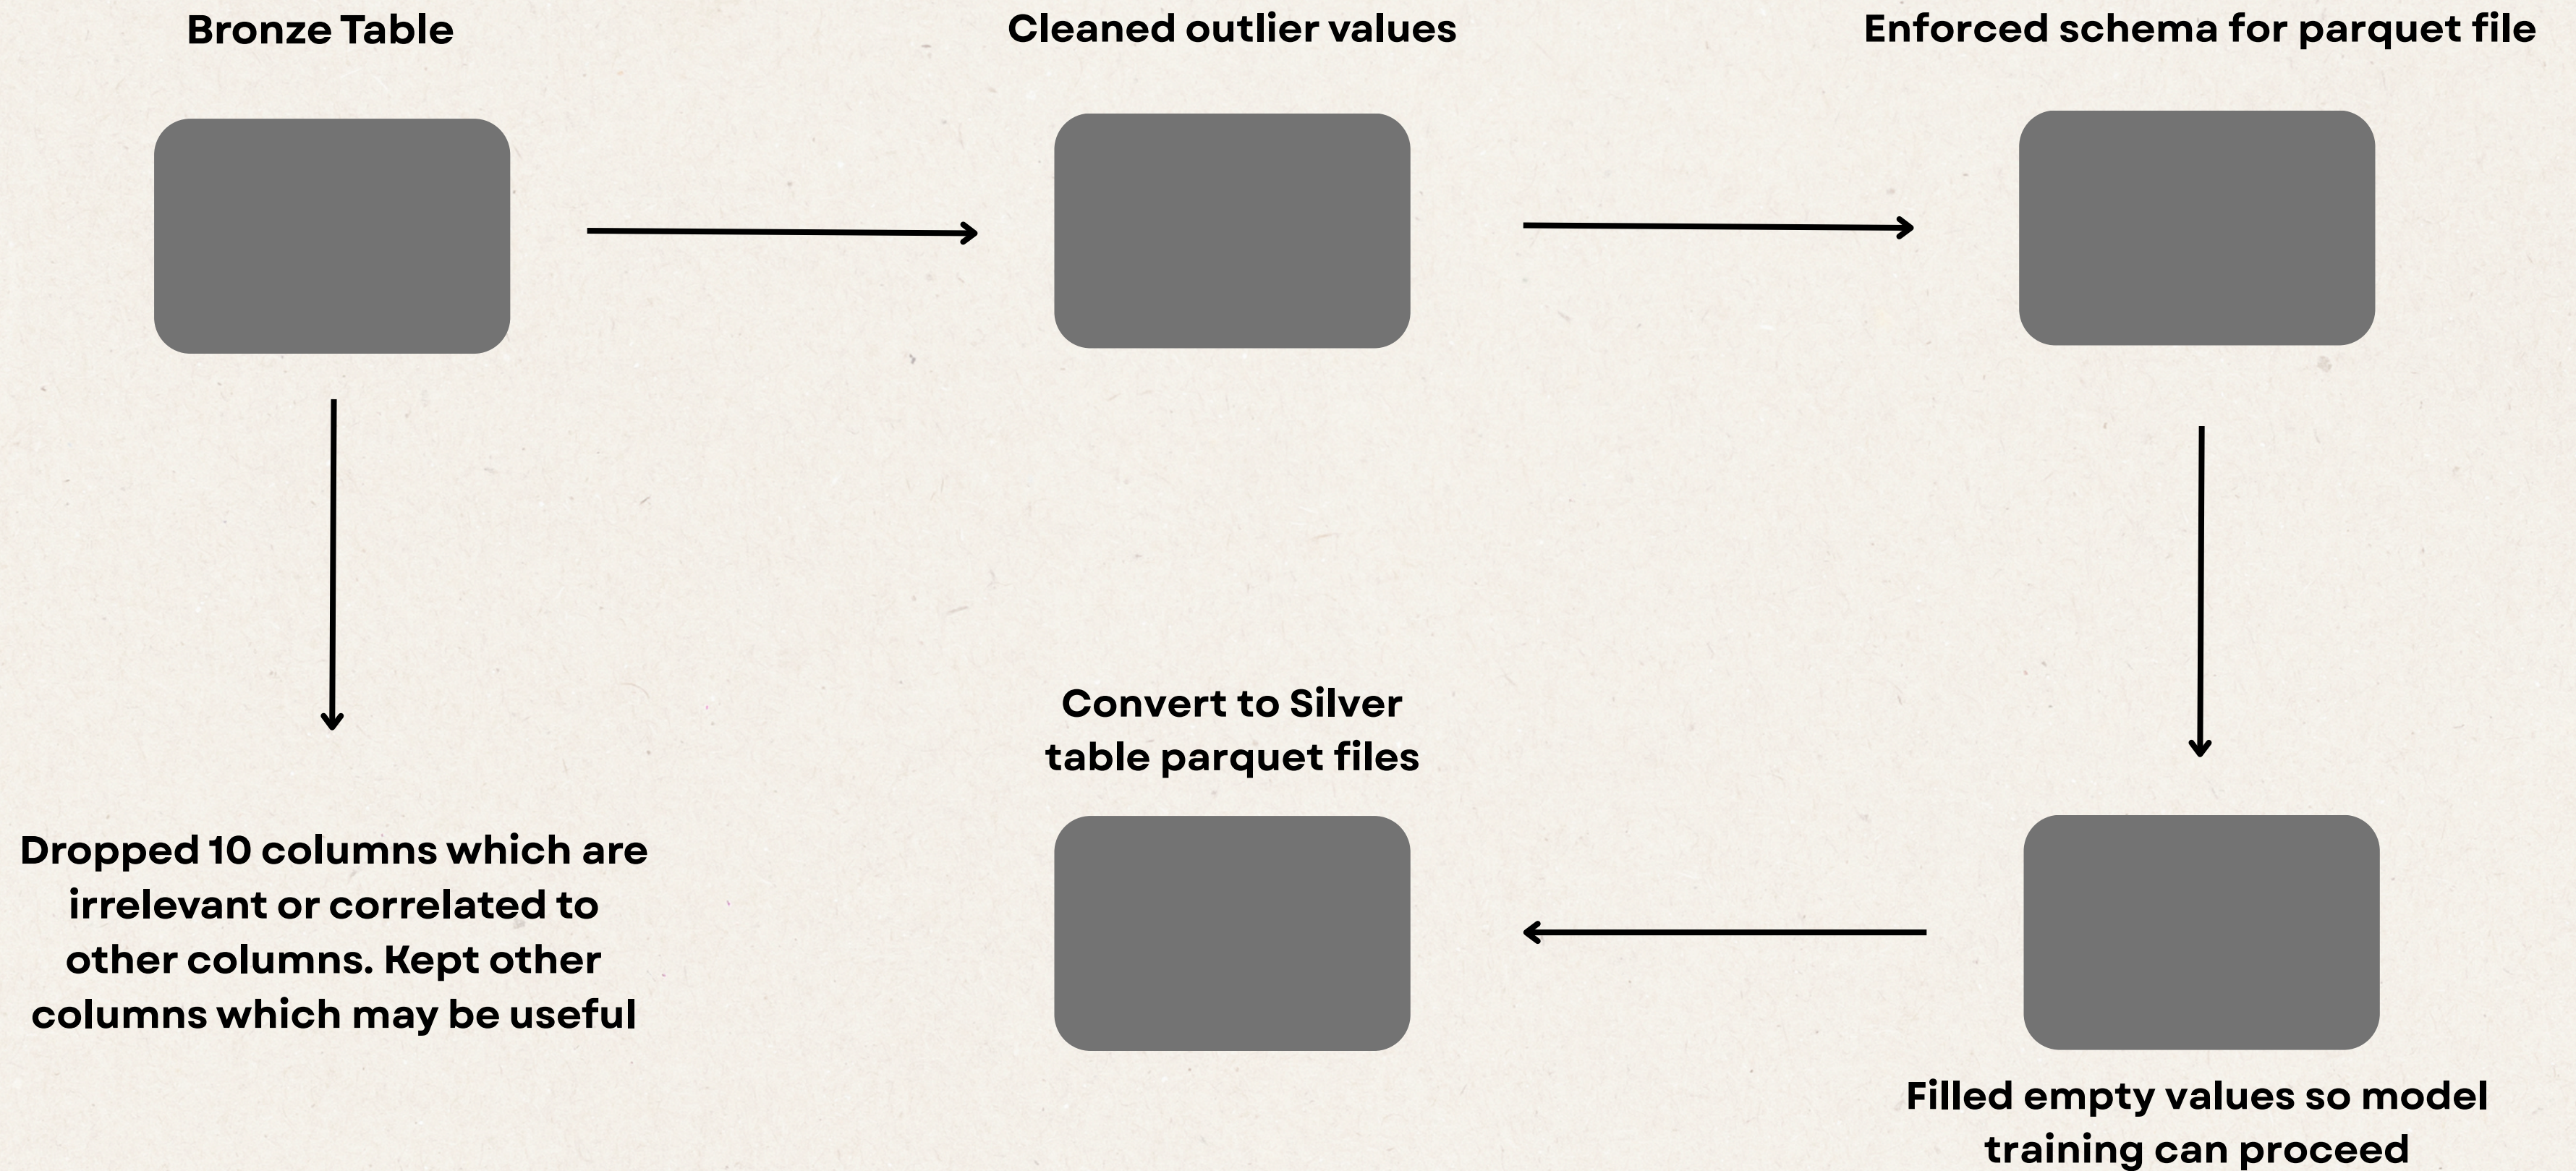

Bronze Table

Snapshot date from Jan 2023 to Nov 2025

Silver Table

04/06

Gold Table

05/06

Silver Table

Filter customer at mob = 6,
including other data will
introduce temporal leakage

Created labels for dpd more than
30 and high/low income

Saved as gold
parquet files

Kept 6 relevant columns

Sample Output

06/06

Age	Customer_ID	label	label_def	snapshot_date	income_lvl
30	CUS_0x1572	0	30dpd_6mob	2025-02-01	Low_Income
30	CUS_0x2509	1	30dpd_6mob	2025-02-01	Low_Income
30	CUS_0x264a	0	30dpd_6mob	2025-02-01	Low_Income

30	CUS_0x7453	1	30dpd_6mob	2025-02-01	Low_Income

only showing top 20 rows

Sample output of top 20 rows, Label = 1 is applied when MOB = 6 and Days Past Due (DPD) = 30 which indicate likelihood to default, High income level allow discretion to grant loan despite likelihood to default
